Dear Parent/Guardian:

We are excited to be working with local schools to bring preventative dental services and dental education directly to children. If you enroll your child in the program, he/she will be seen by a NYS Licensed Dental Hygienist who will provide dental care and education that promotes healthy teeth and gums. Services include screening, cleaning, fluoride treatment, dental sealants, education, and referral for additional treatment if necessary. Upon completion of care, each child will receive an Oral Health Report Form indicating services provided and appropriate referral.

All are welcome! Even if your child currently sees a dentist, he/she is still welcome to participate. We ask that you provide the information about your current dental provider on the consent form where indicated. Services will not be duplicated.

Families are not charged for services, only insurance companies if applicable. If you have dental insurance, we ask that you provide the insurance information to us. If your child does not have dental insurance, all services will be provided at **no cost**.

Instructions:

To participate, please complete the front and back of the enclosed form and return it to your child's school. If your child will NOT be participating in the program, please indicate this by checking No at the top of the consent form and return the form to their school.

Dental Emergencies:

If your child has a dental emergency at any time of the day or night, call the office of his/her regular dentist if applicable. If your child does not have a regular dentist, call the Hudson Headwaters Dental Services Center at 518-623-3918.

The Healthy Smiles program is compliant with Infection Control guidelines set by the CDC, OSAP and NYSDOH.

Dental FAQs and Tips:

What are Dental Sealants?

- Dental Sealants are a thin protective coating painted onto the chewing surfaces of permanent teeth/molars. Sealants provide protection for your child's teeth by acting as a barrier, helping to prevent plaque bacteria and food from settling into deep grooves and fissures where cavities commonly form. Sealants are a simple painless procedure that can significantly reduce the risk of tooth decay.

What is Fluoride?

- Fluoride is a naturally occurring mineral. It helps to strengthen and re-mineralize enamel. Fluoride can be found in some community water sources and oral care products such as toothpaste and mouth rinse.
- Fluoride varnish is a concentrated topical fluoride treatment used to help prevent tooth decay. It is quick and easy to apply (brushed on) and is offered in a variety of flavors. Fluoride varnish helps to re-mineralize weakened tooth enamel, making teeth stronger and more resistant to acid attacks.

Brushing Tips

- Your child should always use a soft-bristled toothbrush.
- Brush 2x day for 2 minutes (morning and night).
- Toothbrushes should be replaced every **three** months or after being sick.
- **Never** share a toothbrush. This can spread germs.

Flossing Tips

- Flossing cleans between the teeth where a toothbrush can't reach.
- Your child can begin flossing when any two teeth touch.
- Floss 1-2x daily.
- Children need assistance with flossing until age 7 or 8.
